

IIgANN 2023 Tokyo – Symposium

Sponsors: Calliditas & STADA

Symposium Title:

Evolving landscape in IgAN – Treating IgAN in 2023 and Beyond

Abstract Text (max. 100 words):

IgA Nephropathy (IgAN) is the most glomerulonephritis worldwide and a significant contributor to End-Stage Renal Disease (ESRD). At our upcoming event, we gather the foremost experts in the field of IgAN to delve into the rapidly evolving landscape. We will explore the latest advancements and progressive strategies that are redefining the management of this condition. With IgAN peaking during the second and third decades of life, it becomes imperative to approach this disease with the urgency it deserves—preserving every nephron and extending dialysis-free survival. Our esteemed experts will provide an overview of recent data on novel therapeutic agents and shed light on ongoing developments driven by an improved understanding of IgAN's pathophysiology.

Industry Symposium slot:

- **September 29th 7:30 – 8:30**
- Industry Symposium 3
- KFC hall
- Capacity: 300 persons

Planned chairperson(s):

Professor Yusuke Suzuki

Presentations & speakers:

Speaker	Session Title
Professor Jonathan Barratt (UK)	Redefining Standards for IgAN Treatment in a Rapidly Evolving Landscape
Professor Richard Lafayette (US)	IgAN Treatment: a clinical update

Agenda:

- 1. Introduction** 7:30 – 7:40
- 2. Speaker 1** 7:40 - 8:00
- 3. Speaker 2** 8:00 - 8:20
- 4. Discussion** 8:20 - 8:30
